Assignment 4

Creating a Web Page

The file <u>assignment4-style.css</u> is the main stylesheet for these pages. Your task in this project is to create a two new web pages using features from `assignment3-style.css` according to the following requirements

- To orient the instructions, the pages should be `first.html` and `second.html`
- `first.html` should include examples of the following features
    1. A definition list
    2. An ordered list with at least two levels using the `outline` class from the style sheet
    3. An ordered list with at least two levels with default styling
    4. A link to `second.html`
    5. A link to a page on an external web site
    6. A paragraph
- `second.html` should include the following features
    1. Put all the remaining contents of this page in a `div` with the id `content`.
    2. A table, at least 3 by 3, using the `grid` class
    3. A table, at least 3 by 3, using default styling
    4. Two levels of headers
    5. A paragraph with class `hint`. The assignment will use different colors, but try highlighting the area after 'Hint->'

       Like this!

The two html files will be tested by copying them to a folder that also contains the file `assignment4-style.css`. The files will be accessed either directly through the file system or through a web server.

Zip up a project or folder with the two HTML files and submit through <u>Desire2Learn</u> in the dropbox

Due on October 9, 2015
